

Logical Sequencing of Concepts

Appropriate Student Level: Any Level

Suggested Class Size: 3 – 100+

Ease of Use Rating: Easy – Moderate

Activity Description:

Students must show how the concepts would be shown in a sequence from simplest to most complex, in a hierarchical manner. This exercise is designed to demonstrate to students how concepts interrelate and build on each other and the order in which one must learn these concepts to best understand how they work. This sequence can be shown in a written or graphic format. The sequencing can be done in small or large groups of students. The ‘problem’ or leading concept must have sequential steps or ideas. The steps should be obvious or resources should be available to help students discover the answer on their own. By helping students understand the sequential order of why things happen may encourage a deeper understanding of the more complex concepts.
